Summary

B.Tech graduate in Artificial Intelligence and Data Science with hands-on experience building machine learning and LLM projects in Python and PyTorch. Implemented a GPT-style transformer from scratch, built a local retrieval-augmented generation (RAG) pipeline, and compared LoRA adaptation with full fine-tuning. GATE DA qualified; seeking an entry-level AI/ML or AI Engineering role.

Technical Skills

Languages: Python
Machine Learning: PyTorch, Transformers, Model Training, Classification, Evaluation Metrics
LLM Engineering: Retrieval-Augmented Generation (RAG), LoRA, Vector Retrieval, Local LLM Inference
Libraries and Tools: Hugging Face Transformers, PEFT, Sentence-Transformers, ChromaDB, Ollama, Pydantic, Git, GitHub
Additional: Django, Gemini API, OpenCV, DeepFace

Selected Projects

nanoGPT From Scratch | PyTorch 2026

- Implemented a character-level GPT-style transformer in PyTorch, including token embeddings, causal self-attention, multi-head attention, feed-forward layers, residual connections, and the training loop.
- Evaluated the trained model using training and validation loss, recording approximately 1.77 training loss and 1.90 validation loss.

Local RAG Pipeline | ChromaDB, Sentence-Transformers, Ollama 2026

- Built a document-question-answering pipeline covering document ingestion, overlapping chunking, embedding generation, vector retrieval, and context-grounded answer generation with a locally served Llama 3.1 8B model.
- Tested retrieval against 8 labeled questions and checked refusal behavior when the available documents lacked the information needed to answer.

Emotion Classification with LoRA | Hugging Face PEFT 2026

- Compared LoRA adaptation with full fine-tuning of DistilBERT on the six-class dair-ai/emotion dataset using held-out evaluation.
- LoRA achieved 91.65% accuracy and 0.8771 macro F1 while updating approximately 1.10% of the model's parameters.

CareerMate | AI Recruitment Platform 2025–2026

- Developed as a collaborative project combining resume screening, aptitude assessment, AI-assisted interviews, and recruiter-facing candidate summaries in one recruitment platform.
- Integrated Django and the Gemini API for interview question generation, alongside OpenCV and DeepFace for computer-vision features.

Education

B.Tech, Artificial Intelligence & Data Science Aug 2026
Vimal Jyothi Engineering College, Kannur CGPA: 7.95/10

Achievement

GATE DA Qualified 2025
